FILTERING TECHNIQUES

Heuristic analysis – a highly complicated intellectual technology of empirical analysis of all parts of messages and attachments to them.

Counter-reaction – the most advanced and efficient technology which helps counteract the tricks used by the spammers to outsmart anti-spam filters.

HTML-patterns – help protect against spam messages with HTML-code, which often include online images.

Semantic analysis – the comparison of words and phrases from the message with the words and phrases typical for spam.

Anti-scanning technology – a special module helps protect against scams, the so-called "Nigerian" scams, loan scams, lottery and casino scams, false messages of banks and credit organizations.

DEFEND WHAT YOU CREATE

SYSTEM REQUIREMENTS

Any mail client receiving e-mails via POP3\IMAP4

Dr.WEB Anti-virus v.4.33 or higher

Windows 9x\NT\2000\XP

CLIENT-INDEPENDENT SOLUTION

Dr.WEB Anti-spam does not require plug-ins for different mail programs to operate. Being deeply integrated into **Dr.WEB** SpIDer Mail monitor, it is completely independent of any e-mail client used for receipt and processing of e-mails.

Dr.WEB Anti-spam – is an efficient and highly productive spam filtering solution.

Dr.WEB Anti-spam uses different filtering techniques for different types of unsolicited e-mails – such as spam, phishing, pharming, scamming – and bounce messages, this technique produces an exceptionally high detection rate.

Dr.WEB Anti-spam filter operates autonomously and does not require connection with an external server or database, which considerably saves traffic.

Messages marked as spam are never deleted. Spam messages can be automatically sent to a designated folder and checked/deleted at a later date.

The updates of Dr.WEB Anti-spam are released daily and downloaded automatically by the Dr.WEB updating utility. By using the unique spam filtering technologies, **Dr.WEB** is able to supply daily updates and rules that even the smallest bandwidth handles with ease.

Dr. WEB Anti-spam is easy to use, even for PC-beginners. After the spam-filtering is activated and the first e-mail message is received, the anti-spam immediately starts operating by automatically! In addition, the software has functionality for advanced settings, this allows customization.
