#### DEFEND WHAT YOU CREATE

##### SUPPORTED PLATFORMS

Windows 95 OSR2/98/Me/NT 4.0/2000/XP

##### MINIMUM SYSTEM REQUIREMENTS

P133, 32MB RAM, 10 MB hard disk space,  
Internet connection, CD-ROM drive.

**Requires Internet connection for  
registration and virus definitions updates**

#### KEY FEATURES

**Dr.Web** Anti-virus is one of the most resources-friendly anti-virus programs and fully compatible with Microsoft Windows, beginning from Windows 95 OSR2 and to Windows XP Professional.

The distribution of **Dr.Web** is the smallest of all leading anti-viruses – around 9MB, just 12-15 MB of free space is required after installation! Dr.Web saves and never overloads computer resources which makes it indispensable in outdated computers of older generations.

**Dr.Web** protects computers from any kinds of malicious codes, it is unsurpassed in detection and curing of polymorphic viruses.

Only **Dr.Web** can be installed on the already infected computer and can cure it without any additional utilities! During the installation the main computer memory and startup files are scanned. During the installation phase, there is an option of updating **Dr.Web** virus bases with the hottest add-ons to the virus base, which takes just a few seconds.

Only **Dr.Web** can detect and neutralize viruses existing in main computer memory and never met in form of files, such as Slammer and CodeRed.
